**Brunel University London**                                                                                      **London, Uk**
*Computer Science/Bachelor of Science*                                                                      *9/2022- 07/2025*
Areas of Interest: Frontend Development, UI Design
*Awards:* 20% Scholarship, Participant in Brunel Venture Competition 2025, UKIEPC Contestant

## WORK EXPERIENCE

**Yumee**                                                                                                                **London, Uk**
*Frontend Developer & UI designer*                                                                              *1/2024 - 6/2024*
- Redesigned the user interface of the existing Kiosk system and created Adobe XD prototypes, subsequently developed and implemented across 14 customer interfaces.
- Directed a product photoshoot, creating digital assets for the company's advertising campaigns.
- Designed a UI for a fleet management system, identifying growth opportunities.

**PDP Academy Tashkent**                                                                              **Tashkent, Uzbekistan**
Software *Mentor & Frontend developer*                                                                       *8/2019 - 2/2020*
- Led the development and design of multiple websites, focusing on UI aesthetics and functionality.
- Developed a responsive website's UI design, including its color scheme and design system.

## PROJECT EXPERIENCE

**MiniDesk**                                                                                                           **London, Uk**
*Full-Stack Developer*                                                                                           *10/2024 - 1/2025*
- Developed an autonomous pipeline which handles automatic application builds, tests and deployment.
- Designed a user interface and optimized it with results drawn from user testing and feedback.
- Created and presented the project's pitch deck to an audience of 100+ people.

**ELBE**                                                                                                                    **Remote**
*Front-end Developer & UI Designer*                                                                           *2/2024 - 5/2024*
- Built an e-commerce platform based on Shopify API for emerging designers in London
- Implemented a page for customers to preview digital fashion items in 3D
- Developed a design system that represents the mission of the platform in aesthetically pleasing user interface.

**Flight Booking System**                                                                                       **London, Uk**
*Project Lead & Designer*                                                                                       *9/2022 - 4/2023*
- Developed a Java GUI-based flight system to streamline airport operations.
- Led a team of developers, maintaining high standards for code quality and project timelines.
- Presented the system to stakeholders, effectively communicating its features and benefits.

**COVID-19 Detector Web Application**                                                                  **London, Uk**
Developer                                                                                                           *9/2024 – 01/2024*
- Developing a web application to detect COVID-19 from chest X-ray images using Convolutional Neural Networks.
- Implementing deep learning models to classify images with high accuracy.
- Designed and tested a user-friendly interface for image uploads and results visualization, deployed on Heroku.
